

THE PÖPPELMANN EFFECT:

# Closed material loop through recycling.

We do it.  
**More resource-saving.**

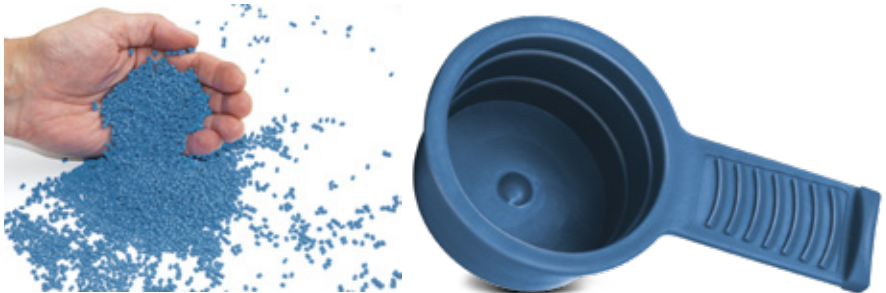

**PÖPPELMANN**

**KAPSTO®**

# Resource-saving protective caps and plugs made from recycled plastics.

Topics such as environmental and climate protection are becoming increasingly important for companies. Also we can contribute to resource conservation – by recycling. In the PÖPPELMANN blue® initiative we therefore produce our plastic caps and plugs from recycled materials, which can be **obtained from items such as previously used protective caps and plugs.** This is how we close the raw material loop.

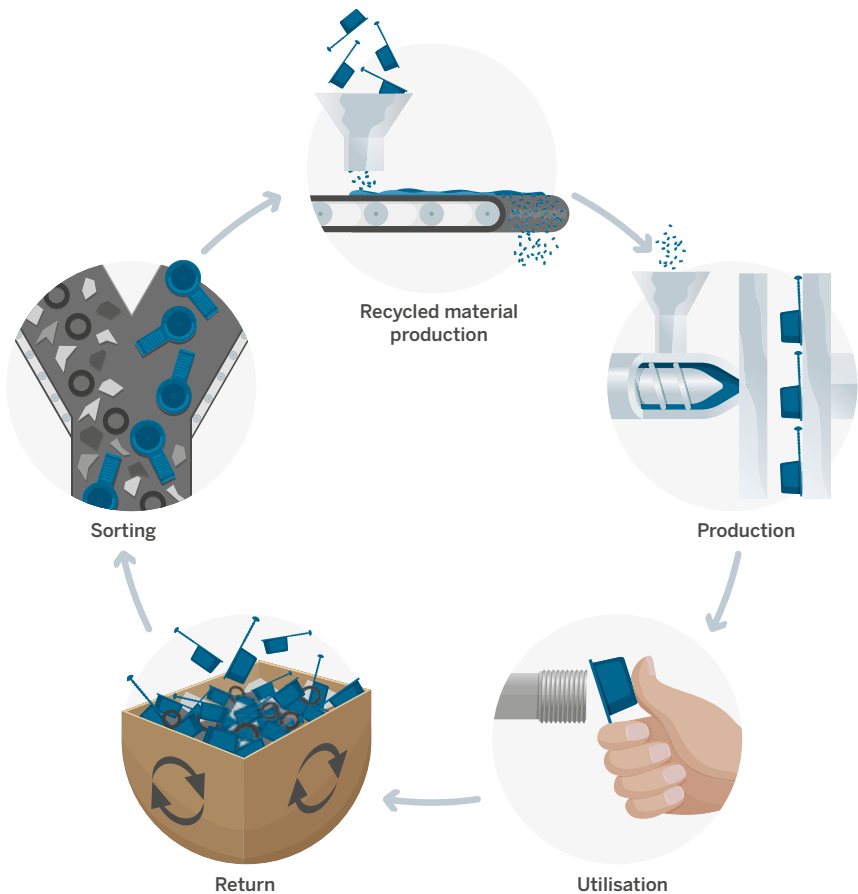

## Advantages that not only benefit you.

- + The raw material loop is closed (closed loop).
- + The use of recycled plastics conserves fossil resources.
- + The demand for environmentally friendly and resource-saving products is growing rapidly.
- + Pöppelmann has been using materials for over 20 years.

## This is how we close the raw material loop.

Plastic is a valuable raw material. The industrial sector uses many plastic items which are only intended for short-term, single-use. Pöppelmann KAPSTO® uses recycled plastic materials recovered from such items to produce new KAPSTO® protective caps and plugs. With this process, we can turn a KAPSTO® item back into a new protective cap or plug. This closes the raw material loop and thus saves finite fossil resources.

“Closing the material loop is one of the big challenges of the plastics industry. That’s what we stand for with our initiative PÖPPELMANN blue®.”

**Torsten Ratzmann**, CEO, Pöppelmann GmbH & Co. KG
